

Ten minutes' walk to green space?

Labour's 2026 green-space pledge, tested on open population and map data

THE CLAIM

“Every person ... no more than ten minutes’ walk from an open or green space.”

Partit Laburista, manifesto 2026, priority 19 (our translation)

Now a government commitment: Labour won the election of 30 May 2026.

The PN's net-zero Gozo pledge, checked here until v1.1, is now Claim Check 107.

MAIN RESULTS

99.9%

Any green or open space

Share of residents already within 800 m (straight line). Read broadly, the pledge is already almost met.

55%

Parks of at least 0.5 ha

Within a realistic ten-minute walk. About 240,000 people are outside. Which one counts? Not said.

24%

WHO-style measure

Within 300 m of a public park of at least 0.5 ha, the indicator WHO Europe suggests.

0

Definitions published

No minimum size, no baseline map, no target year in the manifesto.

3 parks

Named in the manifesto

Manoel Island, White Rocks, Fort Campbell: large parks, which suggests a stricter reading.

FAIR TO SAY

Green space near home is linked to better health, and the PN proposes a Parks Act to define “park”. The goal is sound; the question is whether it can be measured.

WHAT WOULD SETTLE IT

☐ What counts as “open or green space”?

☐ Today's baseline, and the method.

☐ A target year.

☐ The scope of the 40% carbon cut (priority 18).
