Did Malta cut emissions most?

A Eurostat statement, tested against Eurostat's revised data

THE CLAIM

"The largest reductions in greenhouse gases were estimated for Malta (-6.2%)."

Eurostat, news item, 14 August 2025

Q1 2025 compared with Q1 2024; EU +3.4%.

MaltaDaily's headline ("tops EU") is not rated.

VERDICT

LARGELY SUPPORTED

Accurate at release; later revised.

SUPPORTED | **LARGELY SUPPORTED** | NOT SUBSTANTIATED | MISLEADING | CONTRADICTED

MAIN RESULTS

−6.2%

What Eurostat estimated

Malta's Q1 2025 fall, the largest of 27 in the 14 August 2025 release.

−5.0%

What the data say now

Revised: Malta is 2nd, behind Finland (−10.1%).

+1.0%

The full year

Malta's 2025 emissions on 2024 (sum of four quarters); the EU's: +1.0%.

+4.2%

The latest quarter

Q1 2026 on Q1 2025.

20 / 7

Countries up / down

Eurostat's split holds in the revised data.

FAIR TO SAY

Eurostat made no claim about a trend. Figures are estimates that include international aviation and shipping. We could not retrieve the August 2025 vintage of the dataset.

WHAT WOULD SETTLE IT

- ☐ Eurostat's earlier dataset vintages.
- ☐ Why Malta's series steps up between 2023 and 2024.
