

Carbon neutral, and what else?

An airport's carbon claims, tested against its own assured figures

THE CLAIM

“...set to avoid the emission of an average of 1,000 tonnes of carbon dioxide annually.”

Malta International Airport plc, press release, 25 May 2026

A €12.5 million airfield electrification programme; the airport also holds ACA Level 3+.

Company wording; the saving is a projection to 2028.

VERDICT

LARGELY SUPPORTED

Neutral within its scope; saving plausible, unproven.

MISLEADING

CONTRADICTED

MAIN RESULTS

5,444 t

Neutrality adds up

Scope 1 + 2 + business travel against 5,450 t of credits bought (2025).

99.3%

Scope 3 sits outside

Share of the airport's reported footprint, mostly aircraft; Level 3+ does not cover it.

1,000 t

Projected saving a year

From 2028: 18.5% of Scope 1 + 2, but 0.14% of Scope 3.

-22%

Direct emissions vs 2015

Scope 1 + 2 rose 8% in 2025; the company's target is -65% by 2030.

?

Gross or net?

Method, baseline and grid electricity for the 1,000 t are not published.

FAIR TO SAY

The company reports its Scope 3 openly and says the programme addresses it. We did not check the carbon credits' quality or the ACA directory.

WHAT WOULD SETTLE IT

☐ The calculation behind the 1,000 tonnes.

☐ The 2025 ACA certificate and credit retirements.

☐ Ground-power use by stand, by year.

☐ Measured savings once stands operate.
