

Over 30% of our seas protected?

*Testing a government claim about marine protected areas
against EEA boundaries and EU reporting*

THE CLAIM UNDER REVIEW

***“Malta protects more than 30% of
its maritime zone...”***

Environment Minister Miriam Dalli, 2025 (as quoted by Amphora Media).

ERA: more than 35% of the Fisheries Management Zone.

VERDICT: MISLEADING

36% of the 25-nm fisheries zone; 5.5% of the waters reported to the EU

TL;DR

Environment Minister Miriam Dalli said in 2025 that “**Malta protects more than 30% of its maritime zone**”; ERA says its marine Natura 2000 network covers “more than 35% of Malta’s Fisheries Management Zone”. We mapped every marine Natura 2000 site from EEA boundaries and laid it over each zone Malta’s waters are measured by. The maps show that all of the protected sea lies within 25 nautical miles of the coast, and that beyond that line, in 85% of the waters Malta reports to the EU, there is no marine protected site at all.

- 1 The protected area is as stated.** EEA boundaries give 18 marine Natura 2000 sites covering 4,138 km² of sea once overlaps are counted once, matching ERA’s “over 4,100 km²”.
- 2 All of it lies within 25 nautical miles.** No site reaches beyond the Fisheries Management Zone. Outside it lie about 64,000 km² of the 75,715 km² Malta reports to the EU, none of them in a marine protected site (Figures 1 and 2).
- 3 So the percentage depends on what you divide by.** 4,138 km² is 36% of the Fisheries Management Zone, 7.8% of the exclusive economic zone as mapped internationally and 5.5% of the waters reported to the EU (Figure 3). Even if every square kilometre within 25 nm were protected, the share of the waters reported to the EU would be 15%.
- 4 The deep sea is almost unprotected.** A quarter of the waters reported to the EU are deeper than 1,000 m; 0.6% of that deep sea is protected, against 14% of the shallow shelf (Figure 4).
- 5 ERA says which zone it means; the minister did not.** “Maritime zone” suggests all of Malta’s waters. Reaching 30% on the EU basis would need about 18,600 km² more. The EU’s 30% is a target for the EU as a whole, so 5.5% breaks no rule, but it is not “more than 30%”.
- 6 Verdict: misleading (moderate confidence).** Accurate for the 25-nm zone only; unqualified, it overstates protection about sixfold. The minister’s words are known through a news report, and this check covers designation, not management.

THIS CLAIM

SUPPORTED

LARGELY
SUPPORTED

NOT
SUBSTANTIATED

MISLEADING

CONTRADICTED

4,138

km² of sea in 18 marine Natura 2000 sites (EEA)

36%

of the 25-nm Fisheries Management Zone

5.5%

of the marine waters Malta reports to the EU

0 km²

protected beyond 25 nm, where 85% of those waters lie

WHAT WOULD MOVE THE VERDICT UP

The minister’s full statement showing the Fisheries Management Zone was named, or EU acceptance of the FMZ as Malta’s reference area.

WHAT WOULD MOVE IT DOWN

Evidence that Malta reports the 36% figure to the EU, or that sites are not managed.

1

The claim

What was said	Who	Access
“Malta protects more than 30% of its maritime zone, through Natura 2000 sites, scientific monitoring, and a €2 million conservation programme.”	Minister Miriam Dalli, 2025 [2]	Second-hand ♦
“Malta’s marine Natura 2000 network encompasses 18 sites and covers over 4100 km2, equivalent to more than 35% of Malta’s Fisheries Management Zone”	ERA [1]	Read in full
“designated over 35% of Malta’s waters as Marine Protected Areas” (2021)	ERA [2]	Second-hand ♦

Amphora Media published a fact-check of the same statements in August 2025 [2]. We repeated the measurement independently from the EEA boundaries.

2

Method

Boundaries of all Maltese Natura 2000 sites from the EEA (2024 release) [3]; overlapping marine sites dissolved and land removed with OpenStreetMap coastlines; areas in UTM 33N. Reference areas and their outlines: the Fisheries Management Zone, 11,480 km² as stated by the government, rebuilt as 25 nm from Malta’s baselines using the Marine Regions 12-nm limit (11,492 km²) [6]; the exclusive economic zone as mapped by Marine Regions (52,923 km²) [5]; and the 75,715 km² of marine waters Malta reports to the EU [2, 4], drawn from the EEA’s map of the waters reported under the Marine Strategy Framework Directive [7]. Percentages use the official totals; the outlines show where the protected sea lies. Depth from the EMODnet grid [8], grouped into shelf (0–200 m), slope (200–1,000 m) and deep sea (over 1,000 m). Data and scripts: *data/cc-051/*, *tools/cc-051-report/* [11].

3 What the data show

Close up, the network looks extensive: the 18 sites cover much of the sea around Malta and Gozo, and fill 36% of the 25-nm Fisheries Management Zone (Figure 1). Every site stops at or inside the 25-nm line.

Malta's marine protected sites and the zones used to measure them

Every protected site lies inside the 25-nm line. Zones measured from the baselines (Marine Regions). Sources: EEA Natura 2000 (2024); Marine Regions; coastline © OpenStreetMap contributors.

Figure 1. The 18 marine sites, the 12-nm territorial sea and the 25-nm Fisheries Management Zone.

The waters Malta reports to the EU reach much further, up to about 350 km to the south-east, over an area more than six times the size of the fisheries zone (Figure 2). In the EEA's map of these waters, Malta's area is labelled "area designated for hydrocarbon exploration and exploitation" [7]. Beyond 25 nm, about 64,000 km² (85% of the 75,715 km²) contains no marine protected site.

Zooming out: the waters Malta reports to the EU, and the part that is protected

EU-reported waters: EEA 'Marine waters used in MSFD' (map-service outline, simplified), where Malta's area is labelled 'Area designated for hydrocarbon exploration and exploitation'. Sources: EEA (2020, 2024); Marine Regions EEZ v12; depth grid EMODnet via EEA; coastline © OpenStreetMap contributors.

Figure 2. All of the waters Malta reports to the EU: protected sites in green, everything else in red.

Measured against each area in turn, the same protected sea gives three very different percentages (Figure 3). Only the smallest area, the fisheries zone, takes the figure above 30%.

The same 4,138 km² of protected sea, measured against three reference areas

Figure 3. One protected area, three percentages. Same scale in each panel; the amber mark is 30%.

Measure	Value	Source	Grade
Protected sea, 18 sites (overlaps once)	4,138 km²	EEA [3]; ERA: over 4,100 [1]	C
Share of Fisheries Management Zone (11,480 km²)	36.0%	calculated	C
Share of EEZ as mapped internationally (~52,900 km²)	7.8%	calculated; Protected Planet 7.83%	C
Share of marine waters reported to the EU (75,715 km²)	5.5%	calculated; BISE 5.5% [4]	C
Protected sea more than 25 nm from the baselines	0 km²	calculated [3, 6]	C
Reported waters beyond 25 nm, none protected	~64,200 km² (85%)	calculated	C

Measure	Value	Source	Grade
Whole 25-nm zone as a share of the reported waters	15.2%	calculated	C
Extra area for 30% on the EU basis	~18,600 km²	calculated	C

Which kinds of sea are protected. The global 30% target asks for protected areas that are “ecologically representative” [10]. Depth is a coarse guide to the kinds of seabed and sea life an area holds. Within 25 nm the sites cover about a third of both the shelf and the slope. Across all the waters reported to the EU the picture changes: 14% of the shelf, 5.3% of the slope and 0.6% of the deep sea are protected (Figure 4). The deep sea, over 1,000 m, makes up a quarter of those waters; 97% of the protected sea is shallower than that.

Which kinds of sea are protected: depth bands across the waters Malta reports to the EU

Depth: EMODnet Bathymetry grid via the EEA image service (cells of about 200 m). Areas include internal waters. Sources: EEA Natura 2000 (2024); EEA marine waters (2020); Marine Regions.

Figure 4. Depth bands across the waters Malta reports to the EU, with the protected sites hatched, and the share of each band that is protected.

4 Where the evidence points different ways

Q1 Which area is the right one?

DEPENDS ON THE PURPOSE

EVIDENCE FOR THE CLAIM'S IMPRESSION
Malta manages the FMZ and its national biodiversity target is written for it; a University of Malta geologist told Amphora the FMZ reflects Malta's practical mandate [2].

EVIDENCE AGAINST
For EU accounting Malta itself reports 75,715 km², and the EU's 30% target is tracked on that basis [2, 4]. No other Mediterranean EU state was found using a fisheries zone as the denominator [2]. All of the protected sea lies inside the fisheries zone, so dividing by that zone leaves out every unprotected square kilometre beyond it.

WHY THEY DIFFER, AND WHAT IT MEANS HERE
For this claim: both percentages are arithmetic; only one is how Malta is measured against the EU target. The 30% is a target for the EU as a whole, with each state doing its "fair share" [9], so 5.5% breaks no rule; it is not "more than 30%" either.

Q2 Does "maritime zone" tell the reader which?

NO

EVIDENCE FOR THE CLAIM'S IMPRESSION
ERA's own page names the Fisheries Management Zone [1].

EVIDENCE AGAINST
The minister's statement does not, and "maritime zone" reads as all of Malta's waters.

WHY THEY DIFFER, AND WHAT IT MEANS HERE
For this claim: dropping the qualifier is what makes it misleading.

5 Testing the claim

Sub-claim	What the evidence shows	Rating
A. 18 marine sites, over 4,100 km²	4,138 km² [3].	SUPPORTED
B. Over 35% of the Fisheries Management Zone	36.0% as ERA divides it (34–35% if internal waters are treated alike; see Limitations).	SUPPORTED
C. Over 30% of Malta's "maritime zone" / waters	5.5% of the waters reported to the EU; no protected site beyond 25 nm, where 85% of them lie.	MISLEADING

6 Verdict and requests for evidence

VERDICT

MISLEADING

"Over 30%" holds only for the 25-nm fisheries zone. Of the 75,715 km² Malta reports to the EU, 5.5% is protected, and nothing beyond 25 nm. Confidence: moderate.

Why. The arithmetic behind "over 30%" is correct for one reference area, the 25-nm fisheries zone, and that zone contains all of the protected sea. Stated as a share of Malta's "maritime zone" or "waters" without naming that area, it gives the impression that Malta has met the EU's 30% target. On the basis Malta itself reports to the EU the coverage is 5.5%: the 64,000 km² beyond 25 nm, including nearly all of the deep sea, has no marine protected site. Confidence is moderate because the minister's words are known through a news report.

Evidence we are asking for

- ☐ The minister's statement in full, with event and date.
- ☐ Which reference area Malta will use to report against the EU 2030 target.
- ☐ Management plans and monitoring results for the offshore sites.
- ☐ Any plans for protected areas beyond 25 nm, including deep-sea habitats.

7 Limitations

- Areas computed in UTM 33N with OSM coastlines; small differences from official GIS are expected.
- Percentages use the published EEZ and EU-reported areas. The outlines agree within 0.5%: 52,891 km² (Marine Regions) and 75,484 km² (the EEA's simplified web outline).
- About 183 km² of the protected sea lies in internal waters, landward of the baselines, which the 11,480 km² zone excludes. Treated alike in both numerator and denominator, the fisheries-zone share is 34–35%, still over 30%.
- Depth bands come from a grid of about 200 m and are a proxy for habitat types, not a habitat map.
- This check covers designation, not the effectiveness of protection.

Appendix A: series standards and verdict scale

Every investigation in this series follows the same rules so that verdicts are comparable and challengeable.

Verdict	Meaning
SUPPORTED	Evidence consistently backs the claim as stated.
LARGELY SUPPORTED	Backed by the evidence, with minor caveats that do not change the substance.
NOT SUBSTANTIATED	Stated more strongly than the evidence offered or available allows. May be true in some conditions but has not been shown.
MISLEADING	Omits material facts so that the overall impression is inaccurate, even if individual statements are defensible.
CONTRADICTED	The available evidence points against the claim.

Confidence

High: multiple independent lines of evidence agree. **Moderate:** evidence is relevant but incomplete or indirect. **Low:** evidence is thin, second-hand or conflicting.

Evidence grades

A experiment · B observational study with a control or gradient · C review, guidance or official statistics · D assertion or anecdote. ♦ marks a source known only second-hand.

Standards

- **Quote the speaker, not the headline**, with outlet and date, and link the original where possible.
- **Separate the claim from the evidence offered for it**, and say who made which statement.
- **Grade the evidence** and show differing views side by side where the evidence is unsettled.
- **State what we could not access or verify**, and what would change the verdict either way.
- **Ask for the missing evidence** in specific, answerable requests.
- **Offer a right of reply** before wider circulation and append responses.
- **Correct errors openly** with a version number and change log.
- **Whistle-blow only on evidence:** a verdict of *Misleading* or *Contradicted* requires documents or data that can be shown, not inference.
- **Check every side.** Government, opposition, NGOs and developers are held to the same standard.

Appendix B: revision log

Version	Date	Change
1.0	4 Oct 2026	First issue. Right of reply to the Environment Ministry and ERA not yet sent.
1.1	4 Oct 2026	Maps of all the waters Malta reports to the EU, the three reference areas and depth bands; areas measured from boundary files; clearer summary. Verdict unchanged.
