

OHSA inspections doubled, 74% of sites compliant?

The Occupational Health and Safety Authority's 2025 annual report, tested

THE CLAIM

“...74% of sites were found to be adequately compliant with occupational health and safety requirements.”

OHSA, Annual Report 2025, section 4.3.1 (tabled 1 July 2026)

The report also gives 23,711 inspections in 2025 and nine fatal accidents.

We transcribed the report's tables, recomputed the changes and compared deaths with Eurostat.

VERDICT

LARGELY SUPPORTED

*Figures match the report;
the 74% has no stated base.*

MAIN RESULTS

2.5x

Inspections, 2025 v 2024

23,711 against 9,381 (+152.8%); 9.2 times the 2,585 of 2023. Divisional totals add up.

74%

Construction rated adequate

OHSA's own rating: 21% needed orders and 5% a stop-work order. The base is not stated.

9

Workers died in 2025

Three in construction, four in transport and storage, two in agriculture. Five in 2024.

65%

Safe use of lifting machinery

The weakest feature on site; falls protection 77%, scaffolds 76%.

5 of 9

Victims were third-country nationals

Four Maltese and five third-country nationals died.

FAIR TO SAY

The figures are the regulator's own and reproduce from its tables. More inspections is activity, not proof of safer sites.

WHAT WOULD SETTLE IT

☐ OHSA: the base and definition behind the 74%.

☐ OHSA: reconcile 5% stop-work share with 526 stop orders.

☐ NSO/OHSA: 2025 fatality rates with denominators.
