

The lowest electricity burden in the EU?

A ministry claim, tested against Eurostat and the IMF

THE CLAIM

“...the burden on Maltese families is the lowest in the EU, at 14.33 PPS per 100kWh.”

Energy Ministry press release, 6 May 2025

For the second half of 2024, adjusted for purchasing power.

We checked every figure, then measured burden against income and actual use.

VERDICT

LARGELY SUPPORTED

*Lowest on price,
second against income.*

SUPPORTED

LARGELY

MISLEADING

CONTRADICTED

MAIN RESULTS

1st

Cheapest in purchasing power

14.35 PPS per 100 kWh for a typical household (2,500–4,999 kWh): lowest of 27 (Eurostat).

2nd

Against income

A typical bill is 2.2% of median income (EU 4.7%), second after Luxembourg; also second for low incomes.

5th

On actual use

Maltese homes use more power, a fifth of it for cooling: the average bill is 1.3% of income (EU 1.9%).

€1.0bn

Paid from public funds

IMF: energy subsidies 2022–2025, electricity and fuel together (2025 projected).

–0.2%

Stable since 2020

The EU average rose 35% over the same period. Malta's price was cut in 2014.

FAIR TO SAY

Low, stable prices kept bills among the EU's lightest relative to income through the energy crisis. The release leaves out that taxpayers fund the difference.

WHAT WOULD SETTLE IT

☐ Electricity-only subsidy by year.

☐ Spending share by income group, after 2022.

☐ Plans for targeted support.

☐ Cost-recovery tariff estimate.
