

Gozo: the first climate-neutral region?

A minister's "vision" and the electric buses, tested against public data

THE CLAIM

"...an important step to continue to realise our vision of Gozo becoming the first climate-neutral region in Malta."

Clint Camilleri, Minister for Gozo, 25 September 2026

Reported with a paraphrase: Gozo has begun its transition, including a fully electric public transport fleet.

We could not obtain the plan itself, so we do not know whether it sets a target year.

VERDICT

LARGELY SUPPORTED

*The buses are electric;
the quoted "vision" has no date.*

MAIN RESULTS

100%

Gozo's buses are electric

Public transport in Gozo has been fully electric since late May 2026 (22 new buses, EUR 11 million), per TVM News.

22

New electric buses in Gozo

TVM News, May and July 2026: all Gozo bus services now electric, with a new charging depot.

≈3%

Of Gozo road emissions

Our rough scale check: about 2.6% of a population-proportional estimate. Buses are a small part of the total.

n/a

Target year in the quoted words

Not in the quoted words; plan not read. Pledge label: Not measurable (as of 6 Oct 2026), on those words only.

+39%

Malta's road-transport emissions

2005 to 2024 (Eurostat, national figure). The bus change covers only the bus fleet.

FAIR TO SAY

The electric fleet is real and an early, concrete step. A vision statement is not a false statement; the question is whether the plan can be checked once its target is published.

WHAT WOULD SETTLE IT

☐ The published plan: target year, baseline, boundary.

☐ Gozo's own emissions inventory.

☐ Transport Malta's fleet record.

☐ Whether ferries are in the boundary.
