

Carbon neutral, and what else?

An airport's carbon claims, tested against its figures and public registries

THE CLAIM

“...set to avoid the emission of an average of 1,000 tonnes of carbon dioxide annually.”

Malta International Airport plc, press release, 25 May 2026

A €12.5 million airfield electrification programme; the airport also holds ACA Level 3+.

Company wording; the saving is a projection to 2028.

VERDICT

NOT SUBSTANTIATED

*Neutral within its scope;
the 1,000 t not shown.*

MAIN RESULTS

Level 3+

Neutrality confirmed

ACA lists the airport at Level 3+; 3,780 of 5,450 t of credits found retired.

0.7%

Inside the boundary

Share of the reported 2025 footprint that 'neutral' covers; Scope 3 is outside.

€12.5m

Programme confirmed

EU list shows a €5.39m grant: power at 35 stands, charging for e-buses.

≈300 t

Diesel units alone

A year if every turnaround used one for 22.5 min (gross, indicative).

1,000 t

No method published

Baseline, hours and grid electricity behind the figure are not shown.

FAIR TO SAY

MIA reports its Scope 3 openly and says the programme addresses it. We did not assess credit quality; one credit block was not found in the registries.

WHAT WOULD SETTLE IT

☐ The calculation behind the 1,000 tonnes.

☐ Ground-power and APU parts of Scope 3.

☐ The third credit block's registry record.

☐ Why Scope 1 nearly doubled in 2025.
