

Does Malta authorise water abstraction?

*Testing the Commission's description of Malta's
abstraction controls against the law as published*

THE CLAIM UNDER REVIEW

“Malta has failed to put in place a registration requirement for surface water abstraction and a prior authorisation regime to control the abstraction of surface and groundwater.”

European Commission, July infringements package (INF/26/1376), 8 July 2026.
Summary of its letter of formal notice INFR(2026)2115; the letter itself is not published.

VERDICT: LARGELY SUPPORTED

Matches Maltese law as published; legal sufficiency not judged

Version 1.0 · 6 October 2026
Status: no right of reply needed

TL;DR

On 8 July 2026 the European Commission opened an infringement procedure against Malta (INFR(2026)2115). Its published summary says: **“Malta has failed to put in place a registration requirement for surface water abstraction and a prior authorisation regime to control the abstraction of surface and groundwater. In addition, Maltese law does not ensure a periodic review of the controls over the abstraction of surface and groundwater having a significant impact on water bodies.”** [1] We tested it against the law as published and Malta’s own documents; breach of EU law is for the Commission and the Court to decide.

- 1

What the Directive asks. Abstraction controls “including a register or registers of water abstractions and a requirement of prior authorisation”, reviewed periodically; insignificant abstractions may be exempted [3].
- 2

Malta registers groundwater sources; it does not license abstraction. Sources had to be notified by 2008 and new boreholes are under a moratorium, but notification and drilling permits give no “right ... to draw water” [5, 6]; no instrument found authorises abstraction.
- 3

Malta’s own plans say the same. The 2023 Green Paper proposes abstraction permits issued by ERA [10]; in April 2025 Malta called the framework “close to being finalised” [11]. None appears among the 2024–2026 Legal Notices.
- 4

Surface water: little of it, and no register. Three short watercourses (3.4 km in all) and two tiny pools, none with abstraction as a significant pressure [17]; we found no rule to register its abstraction.
- 5

Verdict: largely supported (moderate confidence). The facts match Maltese law and Malta’s own documents. Caveats: the closed register is a form of control (in 2019 the Commission’s staff called it an authorisation regime [13]); “ensures” review is a legal point, not rated.

IN THIS REPORT	
1 The claim and what we could verify	6 Where the documents point different ways
2 Method	7 Testing the claim
3 What the Directive asks, and Malta’s waters	8 Verdict and requests for evidence
4 What Maltese law contains	9 Limitations
5 What Malta’s plans and reports say	

1 The claim and what we could verify

The speaker is the European Commission. The words are from its July 2026 infringements package, published in the Commission’s press corner (INF/26/1376) and on its Representation in Malta’s website, both dated 8 July 2026 and identical [1, 2]. They summarise a letter of formal notice, which is not published. The same paragraph covers a letter to Spain (INFR(2026)2099), under the heading “Commission calls on Spain and Malta to ensure periodic review of water permits”, and says the two countries “now have two months to respond”.

Document	What it is	Access
INF/26/1376, July infringements package, 8 July 2026 [1]	The Commission’s published summary; the claim	Read in full (press corner print copy)
Representation in Malta page, 8 July 2026 [2]	The same text	Read in full
Letter of formal notice INFR(2026)2115	The legal document the summary describes	Not published
Infringement decisions register	The case record	Not reachable from our network (404)
Malta’s reply (due about two months after 8 July)	The Government’s answer	Not published; none found

Our claim record’s headline, “EU: no permits for water abstraction”, is our intake’s shorthand, not the Commission’s wording. Malta does issue permits to *drill* boreholes [6]; the Commission’s point is about authorising *abstraction*. The headline is not rated.

FAIRNESS AND SCOPE

A letter of formal notice is the first step of an infringement procedure, not a finding by a court. We report what the Commission says, what Maltese law contains and what data exist; we offer no opinion on whether Malta has transposed the Directive correctly. Groundwater status, Water Services Corporation (WSC) production and its “net-zero impact” aim are tested in CC-009, CC-039, CC-047 and CC-108.

2 Method

Question. Does Maltese law, as published, contain (a) a requirement to register surface-water abstraction, (b) a requirement of prior authorisation for abstracting surface water or groundwater, and (c) a mechanism for reviewing those controls periodically? And what do Malta’s own documents and the EU’s data say about them?

Evidence. This is a documentary check. We read the Directive’s text [3] and the consolidated Maltese instruments on legislation.mt [4–9], and searched the titles of all Legal Notices of 2024–2026 in its official sitemap for any new groundwater or abstraction instrument [21]. We read Malta’s Green Paper on groundwater abstraction (2023) [10], its April 2025 report to the Commission on its programme of measures [11], its 2nd water plan [12], and the Commission’s assessments of Malta’s plans [13–15]. Data: Eurostat abstraction by source and sector [16] and Malta’s 2022 Water Framework Directive reporting in the EEA’s WISE system [17, 18]. Every number is recomputed by `tools/cc-101-report/calc.py` from `data/cc-101/`; Eurostat’s flags are kept. Each “not found” statement has a search log in `literature/CC-101/notes.md`. All documents were read on 6 October 2026.

Grades. Legislation, official plans and reports and official statistics are grade C on our scale; there is no experimental or observational evidence to grade for a question of what a law says. News reports are used only to locate material and are marked ♦ where they report data we have not seen. **Verdicts** follow the five-point scale in Appendix A.

3 What the Directive asks, and Malta's waters

Article 11 of the Water Framework Directive requires a programme of measures for each river basin district. Among its basic measures, Article 11(3)(e) requires “controls over the abstraction of fresh surface water and groundwater, and impoundment of fresh surface water, including a register or registers of water abstractions and a requirement of prior authorisation for abstraction and impoundment. These controls shall be periodically reviewed and, where necessary, updated. Member States can exempt from these controls, abstractions or impoundments which have no significant impact on water status” [3]. The Directive was to be transposed by 22 December 2003 (Article 24) and its measures made operational by 22 December 2012 (Article 11(7)). Article 11(5) separately asks for permits to be examined and reviewed where a water body is unlikely to reach its objectives [3].

Malta's natural fresh water is almost all groundwater: 92.9% of the fresh water abstracted in 2024 [16]; desalinated seawater is not counted as abstraction. Its 2nd water plan says “there are no rivers in the Maltese islands” [12]. In its 2022 EU reporting Malta lists three river water bodies, the watercourses of Wied il-Bahrija, Wied il-Luq and Wied il-Lunzjata (1.5, 1.3 and 0.6 km), and two lake water bodies of at most 0.001 km², besides coastal and transitional waters [17]. None of its surface water bodies lists abstraction as a significant pressure; seven of its 15 groundwater bodies do, and four groundwater bodies are in poor quantitative status [17, 18]. Malta told the Commission in 2019 that its only impoundments are small masonry dams in dry valleys holding less than 125,000 m³ in total [13].

Eurostat nevertheless records about 2.96 million m³ of “fresh surface water” abstraction a year in Malta (2019–2024), 7.1% of fresh water abstracted in 2024, split between households (1.71) and agriculture (1.25) [16]. The values are estimates (flag e) and are identical every year within 2010–2018 and within 2019–2024, so they are not a metered series. Eurostat does not say what this water is. The Government's Green Paper counts harvested rainwater as 8% of agricultural supply in 2022 [10], which may be part of it; that is our reading, not Eurostat's.

Sources: Eurostat env_wat_abs (updated 16 Sep 2026; the 2024 values are estimates, flag e), EEA WISE WFD 2022 reporting (significant pressures; quantitative status assessed 2021), retrieved 5–6 Oct 2026. One square per water body. Watercourses and pools: Malta's three river water bodies (3.4 km in all) and two lake water bodies; coastal and transitional waters are not shown.

Figure 1. (a) Fresh water abstracted in Malta in 2024 by source and user. Groundwater: 38.46 million m³, of which agriculture 21.77 and the public supply 14.28; surface water 2.96 [16]. All are Eurostat estimates. (b) Malta's water bodies in its 2022 EU reporting: groundwater bodies with abstraction as a significant pressure, groundwater bodies in poor quantitative status (assessed 2021), and inland surface waters with abstraction as a significant pressure [17, 18].

4

What Maltese law contains

Malta’s groundwater rules date from 2008–2010 and were made under the Malta Resources Authority Act. In 2024 Act XVII moved them to the Environment Protection Act and to the Environment and Resources Authority (ERA), “until other provision is made” [9]. Together with the regulations that transpose the Directive, they are the instruments a reader would look to for registration, authorisation and review.

Sources: Directive 2000/60/EC; S.L. 549.100, 549.164–549.166 (legislation.mt); SWD(2019) 48; COM(2025) 2; Green Paper (Nov 2023); 2nd and 3rd plans; Malta’s interim report (Apr 2025); INF/26/1376. Points sit at the month of publication or entry into force (mid-year where only the year is known). Legal Notices of 2024–2026 on legislation.mt checked on 6 Oct 2026.

Figure 2. EU and Maltese steps on abstraction control, 1997–2026, one row each in date order [1, 3–7, 10–14, 21].

Instrument	What it does	Register?	Permit to abstract?	Review?
S.L. 549.100 Water Policy Framework Regs (2015) [4]	Reg. 12(3)(e) repeats Article 11(3)(e) almost word for word as a duty of the “competent authority” in the programme of measures, including “These controls shall be periodically reviewed”.	Duty stated	Duty stated	Duty stated
S.L. 549.164 Notification of Groundwater Sources (2008) [5]	Every groundwater source had to be notified by 20 Nov 2008 (later only pre-1955 sources and certain shafts). Reg. 6: notification “does not in any way give any right ... to draw water”; ERA may order closure “at any time”.	Yes: groundwater sources only	No	No term or review
S.L. 549.165 Borehole Drilling (2008) [6]	A permit is needed to drill; a moratorium on new applications since 2008, with exceptions such as sea-wells. Reg. 9: a drilling permit gives no “right to draw water”. Reg. 10: ERA may order extraction stopped or reduced where a borehole has a significant impact.	Register of drilling permits	No	Case by case (reg. 10)
S.L. 549.166 Metering (2010) [7]	Registered and notified sources are to be metered by WSC; exemptions for sources without pumps, cultural property and domestic perched-aquifer sources under 1 m³ a day.	—	No	No
S.L. 545.14 Water Supply and Sewerage Services (2004) [8]	Licences for water suppliers, including tankers. “Supply of water” is defined to exclude “water abstraction”.	Licensed suppliers	No	Licence term

Also read: S.L. 549.168 (users of a source), S.L. 549.172 (environmental permits; no abstraction category) and the WSC Act (licensing articles deleted in 2000) [7, 9]. None registers surface-water abstraction.

So Maltese law has a closed register of groundwater sources, a drilling moratorium, meters and powers to close a source or cut its abstraction. What it does not contain, in the instruments read, is an authorisation that says who may abstract how much, for how long, and when that is reviewed. The general duty in S.L. 549.100 says such controls shall exist and be reviewed; it does not itself set them up.

5 What Malta’s plans and reports say

The Government proposes the missing permit. The November 2023 Green Paper, by the Energy and Water Agency (EWA) and ERA, lists the 2008–2010 regulations as the current framework and proposes a new one: “Following the enactment of the legal framework, no groundwater source will be utilized for the abstraction of groundwater unless an abstraction permit or clearance has been issued by the Environment and Resources Authority (ERA)”, with “permit conditions ... renewable for defined fixed term periods”, a public register of abstractors, quotas for farmers and tariffs for commercial and domestic users, “periodically reviewed” [10]. WSC’s own sources would be outside the framework, with its abstraction capped at 14 million m³ a year to 2030 [10].

Malta’s report to the Commission. Malta’s 3rd water plan (March 2024) lists this as Measure 053, “Development of a Groundwater Abstraction Licensing Framework” [11]. In its April 2025 interim report on that plan, under Article 11(3)(e), Malta wrote that “National legislation requires all groundwater abstraction stations, regardless of yield, to be registered with the ERA. Only these registered sources are permitted to extract groundwater, and no new sources have been authorised since 2010, apart from seawater sources” [11]. The same report says the licensing framework is “close to being finalised. The next step will be for the proposed regulation to be issued for public consultation and eventually adopted by Government”, and that the resources to run it are “still being secured and configured” [11]. Its section on Article 11(3)(e) does not mention surface water.

Where things stand. Of the 943 Legal Notices of 2024–2026 on legislation.mt, one title mentions groundwater, abstraction, boreholes, wells or water policy: L.N. 374 of 2024, which adds research boreholes by public entities to the exceptions from the drilling moratorium. None creates an abstraction permit, and the consolidated groundwater regulations show no later amendment (checked 6 October 2026) [5–7, 21]. A news investigation reports that ERA said nothing had happened since the Green Paper beyond “internal discussions” ♦ [20].

Registered and metered sources

What	Number	Source	Grade
Boreholes operated by agriculture	3,553	Green Paper, 2023 [10]	C
Boreholes registered for commercial activities	245	Green Paper, 2023 [10]	C
Registered low-yield sources (spieri), mostly without pumps, so not metered	3,405	Green Paper, 2023 [10]	C
WSC boreholes (plus 12 pumping stations); abstraction “fully accounted for”	110	Green Paper, 2023 [10]	C
Private sources metered	“most” (2025); “practically all” (2019)	Malta, interim report [11]; Malta’s clarification in SWD(2019) 48 [13]	C
Registered commercial boreholes reporting no abstraction data	more than 63% ♦	ERA data reported by Amphora Media, 2026 [20]	D

We found no published count of metered sources. The ♦ figure is second-hand (a news report of ERA records we have not seen) and is not used for any rating. Domestic boreholes (pools, gardens) have no count in the Green Paper.

6

Where the documents point different ways

Q1 Is Malta's closed register a "prior authorisation regime"?

DOCUMENTS DIFFER; LEGAL QUESTION

EVIDENCE FOR THE COMMISSION'S STATEMENT

Malta's laws say notification and drilling permits give no right to draw water [5, 6]. No instrument sets who may abstract how much or for how long. The Government's own Green Paper treats an abstraction permit as new, to be created by "the enactment of the legal framework" [10], and Malta's 3rd plan lists it as a measure still to be delivered [11]. The Commission's 2026 summary says Malta "failed to put in place" such a regime [1].

EVIDENCE THAT POINTS THE OTHER WAY

Malta reports that "Only these registered sources are permitted to extract groundwater" and that no new sources have been authorised since 2010 [11]: a closed list, so in practice only known sources may pump. In 2019 the Commission's own staff wrote that "in Malta there is a concession, authorisation and/or permitting regime to control groundwater and a register of groundwater use", while asking for better controls [13].

WHY THEY DIFFER, AND WHAT IT MEANS HERE

Why they differ: one view counts permission to keep a registered source; the other asks for an authorisation that sets the terms of abstraction. The 2019 description summarised the plan Malta reported; the 2026 statement is about transposition, that is, what Maltese law contains. **For this claim:** the facts the Commission describes are in the documents; which reading the Directive requires is the legal question in the procedure, which we do not decide.

Q2 Does Maltese law "ensure" periodic review?

NOT RATED; LEGAL ASSESSMENT

EVIDENCE FOR THE COMMISSION'S STATEMENT

The operative instruments set no term, expiry, renewal or review for a notified source or its use [5–7]. The Green Paper proposes fixed-term permits and periodic review of quotas and tariffs, implying none exist now [10]. Across the EU the Commission found review periods "ranging from 6 years to several decades or even indefinite", and said it is enforcing the obligation to review permits [15].

EVIDENCE THAT POINTS THE OTHER WAY

S.L. 549.100 reg. 12(3)(e) copies the Directive's words: "These controls shall be periodically reviewed and, where necessary, updated" [4]. ERA may also order a source closed or its abstraction cut where it has a significant impact [5, 6], and the programme of measures itself is reviewed every six years [3, 4].

WHY THEY DIFFER, AND WHAT IT MEANS HERE

Why they differ: a duty written into law is not the same as a procedure that carries it out, but whether the first is enough is a question of EU law. **For this claim:** we show both and give no rating.

7 Testing the claim

Sub-claim	What the evidence shows	Rating
A. The Directive requires abstraction controls, with registers and prior authorisation, reviewed periodically	Article 11(3)(e) says so; abstractions with no significant impact on water status may be exempted [3].	ACCURATE
B. Malta has no registration requirement for surface-water abstraction	Malta's register covers groundwater sources only [5]; no surface-water provision in the instruments searched [4–9, 21]; Malta's 2nd plan notes a "lack of knowledge" of surface-water abstraction [12]. Surface water is small: three watercourses (3.4 km), two pools [17]; Eurostat estimates 2.96 million m ³ a year [16].	ACCURATE (LAWS SEARCHED)
C. Malta has no prior authorisation regime to control the abstraction of surface and groundwater	No instrument grants or conditions permission to abstract; notification and drilling permits give no right to draw water [5, 6]; the Government proposes the first abstraction permits, not in force on 6 Oct 2026 [10, 11, 21]. But the register has been closed since 2008 and Malta treats registration as permission to pump [11]; the Commission's staff called it an authorisation regime in 2019 [13].	LARGELY ACCURATE
D. Maltese law does not ensure a periodic review of abstraction controls	S.L. 549.100 copies the Directive's review duty [4]; the instruments that run the controls set no term, renewal or review [5–7]; the Green Paper proposes fixed terms and periodic review [10]. Whether the copied duty "ensures" review is a legal question (section 6, Q2).	NOT RATED (LEGAL ASSESSMENT)

Why these ratings. Sub-claim B is "accurate" on a bounded search: we read every instrument a registration rule would sit in and the titles of all recent Legal Notices, and Malta's own reports describe only a groundwater register, but we did not read every Chapter of the Laws of Malta. Sub-claim C is "largely accurate" because the Commission's words describe the law correctly, while the closed register and drilling moratorium, which the summary does not mention, do limit which sources may be used.

8 Verdict and requests for evidence

VERDICT

LARGELY SUPPORTED

The Commission's description matches Maltese law as published and Malta's own plans and reports; the caveats do not change its substance. Confidence: moderate.

Why. (1) The Directive asks for what the Commission says (A). (2) Malta's registration rules cover groundwater sources only, and we found no requirement to register surface-water abstraction (B). (3) No Maltese instrument read grants or conditions permission to abstract; the laws say registration and drilling permits give no right to draw water, and the Government's own Green Paper and 3rd plan propose creating such permits, which were not in force on 6 October 2026 (C). (4) The caveats: Malta's closed register and moratorium are a real, if partial, control; Malta and, in 2019, the Commission's staff have described them as authorisation. (5) The periodic-review sentence turns on what "ensure" requires in EU law, so it is shown, not rated (D). Confidence is moderate because we read the Commission's summary, not its letter; Malta's reply and its 3rd plan itself were not available to us; and the absence of a provision is shown by a bounded search.

What this verdict does not say. It does not say that Malta is in breach of EU law, that anyone abstracts unlawfully, or how much over-abstraction there is. Groundwater status is covered in CC-009 and CC-047. A Largely supported verdict needs no right of reply.

Evidence we are asking for

- ☐ The Commission: the letter of formal notice INFR(2026)2115, or its legal reasoning on Malta's existing register.
- ☐ The Government (ERA, EWA): Malta's reply to the letter, and the draft groundwater abstraction regulation under Measure 053 with its timetable for consultation and adoption.
- ☐ ERA: the number of registered groundwater sources, how many are metered, and how many report readings each year.
- ☐ EWA or the National Statistics Office: what Malta reports to Eurostat as fresh surface-water abstraction (2.96 million m³ a year), and how it is estimated.

9 Limitations

- We read the Commission's published summary [1, 2], not the letter of formal notice, which may set out more detail or different reasoning.
- Malta's reply was due in about September 2026; we found none published.
- Malta's 3rd water plan could not be read from our network (its host refuses scripts and the web archive was unreachable); its Programme of Measures is known here through Malta's April 2025 interim report on it [11].
- "Not found" statements rest on the search recorded in the notes: the instruments listed in section 4, the titles of S.L. 549.160–549.184 and of every Legal Notice of 2024–2026 [21]. A provision elsewhere in the Laws of Malta, or a draft not yet published, would not have been found.
- Eurostat's abstraction figures for Malta are estimates; the surface-water series is flat within periods and unexplained.
- The 2nd water plan was read from a copy hosted outside ERA's site (same title and content; hash in the notes).
- We give no legal opinion; the meaning of "prior authorisation" and "ensure ... periodic review" in the Directive is for the Commission and the Court of Justice.

Appendix A: series standards and verdict scale

Every investigation in this series follows the same rules so that verdicts are comparable and challengeable.

Verdict	Meaning
SUPPORTED	Evidence consistently backs the claim as stated.
LARGELY SUPPORTED	Backed by the evidence, with minor caveats that do not change the substance.
NOT SUBSTANTIATED	Stated more strongly than the evidence offered or available allows. May be true in some conditions but has not been shown.
MISLEADING	Omits material facts so that the overall impression is inaccurate, even if individual statements are defensible.
CONTRADICTED	The available evidence points against the claim.

Confidence

High: multiple independent lines of evidence agree. **Moderate:** evidence is relevant but incomplete or indirect. **Low:** evidence is thin, second-hand or conflicting.

Evidence grades

A experiment · B observational study with a control or gradient · C review, guidance, official statistics, legislation or official reports · D assertion or anecdote. ♦ marks a source known only second-hand.

Standards

- **Quote the speaker, not the headline**, with outlet and date, and link the original where possible.
- **Separate the claim from the evidence offered for it**, and say who made which statement.
- **Grade the evidence** and show differing views side by side where the evidence is unsettled.
- **State what we could not access or verify**, and what would change the verdict either way.
- **Ask for the missing evidence** in specific, answerable requests.
- **Offer a right of reply** where a check finds a claim Not substantiated, Misleading or Contradicted (or a pledge Not measurable, Off track or Missed), before wider circulation, and append responses.
- **Correct errors openly** with a version number and change log.
- **Whistle-blow only on evidence:** a verdict of *Misleading* or *Contradicted* requires documents or data that can be shown, not inference.
- **Check every side.** Government, opposition, NGOs and developers are held to the same standard.

Appendix B: revision log

Version	Date	Change
1.0	6 Oct 2026	First issue. No right of reply needed for a Largely supported verdict.
